5.2. Idealized geometry of a pull-apart basin.....	77
5.3. Mass of CO ₂ produced by an igneous intrusion.....	78
A.1. Hill shaded topographic map showing locations of wells with δ^{13} values.....	108
B.1. Hill shaded topographic map showing locations of geothermal wells.....	118
B.2. Temperature profile examples from the Salton Sea Geothermal Field.....	120
B.3. Hill shaded topographic map of wells with mud logs that were used to create the geologic model.....	130

Adapted from Jones, Clay Grant (2009). A comparison of the potential metamorphic and igneous carbon dioxide fluxes from the Salton Sea geothermal system, California, Master's Thesis, the University of Utah, Salt Lake City, Utah.

Sample Page Layout (Simple)

CHAPTER 1

blank

blank

CHAPTER TITLE IN ALL CAPITAL LETTERS

blank

REQUIRING TWO LINES

blank

blank

First-Level Subheading

blank

Either the first letter of major words or the first letter of the first word of the subheading may be capitalized in major subheadings. One scheme or the other must be followed consistently. Bold print or italics may be substituted for underlining for any subhead level.

blank

blank

blank

blank

blank

blank

blank

First-Level Subheading

blank

Second-Level Subheading Following Directly After

blank

First-Level Subheading

blank

Any freestanding subheading is preceded by a triple space and followed by a double space. The spacing before a freestanding subheading is the same spacing as after a chapter title. If, however, two subheadings follow one another without intervening text, they are separated by a double space only.

blank

blank

blank

blank

blank

blank

blank

Paragraph subheading requires no extra space before it. A paragraph heading is indented the same size space as other paragraphs in the manuscript. Only the first letter

blank

blank

blank

Sample Page Layout (Simple) Continued

of the first word of the paragraph heading is capitalized. The paragraph heading is followed by a period and two spaces, with the text commencing on the same line. A paragraph heading is underlined or placed in bold print or italics.

Another Second-Level Subheading Preceded by Text

It is not necessary to use every level of subheading in every section or chapter; however, a subheading level must appear in the same form whenever it is used, and subheadings always must be in descending order. The student should first determine the maximum number of subheadings required to establish the pattern of subheadings. Chapter or sections with fewer than the maximum number of levels use early levels of the chosen subheading scheme in descending order.

Sample Page Layout (Extended)

CHAPTER 1

blank

blank

FORMAT FOR MAIN HEADING

blank

REQUIRING TWO LINES

blank

blank

Notice that if the main divisions of the manuscript are designated as chapters, both the word chapter and the title of the chapter are placed in all capital letters. There is a triple space between the chapter designation and the title and between the title and the first line of text of the first paragraph.

blank

blank

Handling Subheading

blank

Any freestanding subheading is preceded by a triple space and followed by a double space. The spacing before a freestanding subheading is the same spacing as after a chapter title. If, however, two subheadings follow one another without intervening text, they are separated by a double space only.

blank

blank

First-Level Subheading

Second-Level Subheading

blank

The subheading examples in this template illustrate five levels of subheading. Most manuscripts do not require that many levels. If only one level of subheading is needed, any of the levels illustrated here may be selected. If two levels are needed, any

blank

Sample Page Layout (Extended) Continued

two levels illustrated may be chosen as long as they are used consistently in descending order. The centered underlined level is the most superior; the paragraph heading is the lowest order.

blank

blank

blank

blank

Third-Level Subheading

blank

Fourth-Level Subheading

blank

In a scheme requiring four levels of subheading, the third and fourth levels may be placed flush at the left margin. No subheading is freestanding and indented.

blank

blank

Fifth-level subheading is a paragraph heading. No extra space precedes the paragraph heading because it is not freestanding. The text begins on the same line as the paragraph heading. The subheading is indented the same number of spaces as a usual paragraph. The first word only is capitalized. If a sixth level of subheading is needed, a paragraph heading without underlining (or bold italics) is used.
